# SUBJECT INDEX TO VOLUME 26

## A

Acid groups, determination of the total of in functionalized acrylic dispersions, 511–519
Acid-base titration, for characterization of core-shell functionalized acrylic dispersions, 273–282
Acrylic dispersions, functionalized
  core-shell, characterization of by acid-base titration and surface charge determination, 273–282
  determination of total acid groups in, 511–519
Adsorption
  of polystyrene sulfonate and ethoxylated nonionic surfactants at the carbon black–water interface, 205–220
  of surfactants, 305–332
Aggregate formation, energetics of in aqueous sodium benzoate and salicylate solutions, 451–468
Aggregation
  magnetic, in dispersions of mineral ultrafines, 137–154
  of surfactants, 305–332
Alcohol, with different chain length, the effects of on the phase equilibria of a nonionic surfactant system, 249–261
Alkyl sulfonate/alkyltrimethylammonium bromide, influence of on interfacial tension, 435–449
Aluminum nitrate nonahydrate, reaction with tetraethoxysilane in ethanol, 31–50
Aqueous solution, structure and reactivity in (book review), 651
Association phenomenon, of a mixed cationic surfactant in a non-aqueous system, 233–247

## C

Carbon black–water interface, the adsorption of polystyrene sulfonate and ethoxylated nonionic surfactants at, 205–220
Cellulose, microcrystalline, with sodium carboxymethyl cellulose, pseudoplasticity and thixotropy of starch hydrogels prepared with, 283–294
Ceramics, chemical processing of (book review), 192–193
Colloid carriers, for controlled drug delivery and targeting (book review), 395
Core-shell functionalized acrylic dispersions, characterization of by acid-base titration and surface charge determination, 273–282

D

Differential scanning calorimetry, as a tool to predict emulsion stability, 607–631
Di(hydrogenated tallowalkyl) dimethyl ammonium chloride–water–hexane, temporary phase behavior of a system containing, 469–493
Dilatometer, rotary, for investigation of the kinetics of dispersion polymerization, 197–203
Dispersion polymerization, investigation of the kinetics of by a rotary dilatometer, 197–203
Dispersions
  functionalized acrylic
    core-shell, characterization of by acid-base titration and surface charge determination, 273–282
    total acid groups determination in, 511–519
  of mineral ultrafines, magnetic aggregation in, 137–154
  technological applications of (book review), 191–193
Dyeing technology, developments in based on microemulsion systems, 51–68

E

Emulsions
  four component, phase equilibria and evaporation rates in, 69–97
  oil-in-water, the effect of premix condition, surfactant concentration, and oil level on formation of by homogenization, 633–650
  stability, prediction of by differential scanning calorimetry, 607–631
  temperature-insensitive phase behavior of with nonionic surfactants, 165–188
  water-in-crude oil, from the Norwegian continental shelf, a stabilization and destabilization study of, 557–574
  water-in-oil
    mobility of surfactants at the interface of, 105–114
    relations of interfacially active fractions to stability of, 575–605
Energy transfer, intramolecular, in organized assemblies, 425–434
Esters, the effect of cationic, anionic, and nonionic surfactant micelles on the alkaline hydrolysis of, 531–541
Ethanol, reaction between aluminum nitrate nonahydrate and tetraethoxysilane in, 31–50
Ethoxylation, a new refraction method for determining the degree of for nonionic surfactants, 495–510
Evaporation, rate of in a four-component emulsion, 69–97
Experimental design, introduction to (book review), 191–192

F

Films, Langmuir–Blodget, 333–338
Fractals, in chemistry, geochemistry, and biophysics (book review), 391

G

Glucoamylase, study of the activity and kinetic characteristics of in water-in-oil microemulsion systems, 263–272
Guerbet alcohol, propoxylated, optimum microemulsions formulated with, 115–135

H

Homogenization, the effect of premix condition, surfactant concentration, and oil level on the formation of oil-in-water emulsions by, 633–650
Hydrogels, starch, pseudoplasticity and thixotropy of as prepared with microcrystalline cellulose–sodium carboxymethyl cellulose, 283–294
Hydrolysis, alkaline, the effect of cationic, anionic, and nonionic surfactant micelles on for esters, 531–541

I

Interfacial tension, influence of the combination of anionic and cationic surfactants alkyl sulfonate/alkyltrimethylammonium bromide on, 435–449
Interfacially active fractions, characterization of and their relations to water-in-oil emulsion stability, 575–605
Intramolecular energy transfer, in organized assemblies, 425–434

K

*Kirk-Othmer OnLine CD-ROM* (software review), 299–300, 521

L

Langmuir–Blodget films, 333–338
Lipids, molecular organization, physical functions, and technical applications of (book review), 295
Liquid crystals
  lyotropic, microemulsion and, 373–390
  with white oil, 409–424

M

Magnetic aggregation, in dispersions of mineral ultrafines, 137–154
Micelles, cationic, anionic, and nonionic surfactant, the effect of on the alkaline hydrolysis of esters, 531–541
Microemulsions
  formulated with propoxylated Guerbet alcohol and propoxylated tridecyl alcohol sodium sulfates, 115–135
  and lyotropic liquid crystal, 373–390
  systems
    developments in dyeing technology based on, 51–68
    water-in-oil, study of the activity and kinetic characteristics of glucoamylase in, 263–272
  with white oil, 409–424

Mineral ultrafines, magnetic aggregation in dispersions of, 137–154
Molecular assemblies, organized
intramolecular energy transfer in, 425–434
molecular spectroscopic studies of, 339–372

N

Nonaqueous system, association phenomenon of a mixed cationic surfactant in, 233–247

O

Oil, white, microemulsions and liquid crystals with, 409–424
Oil-in-water emulsions, the effect of premix condition, surfactant concentration, and oil level on the formation of by homogenization, 633–650
Organized molecular assemblies
intramolecular energy transfer in, 425–434
molecular spectroscopic studies of, 339–372

P

Partitioning, aqueous two phase (book review), 393–394
Phase behavior
temperature insensitive microemulsion, with nonionic surfactants, 165–188
temporary, of a system containing di(hydrogenated tallowalkyl) dimethyl ammonium chloride–water–hexane, 469–493
Phase equilibria
in a four-component emulsion, 69–97
of a nonionic surfactant system, the effects of alcohol with different chain length on, 249–261
Polymers, water soluble, sedimentation in the presence of, 155–164
Polystyrene sulfonate, the adsorption of at the carbon black–water interface, 205–220
Proteins, low molecular weight, surface properties of (erratum), 189–190

R

Refraction, a new method of for determining the degree of ethoxylation of nonionic surfactants, 495–510

S

Salicylate aqueous solutions, surface activity and energetics of aggregate formation in, 451–468
Scientific visualization, frontiers of (book review), 297–298
Sedimentation, in the presence of water-soluble polymers, 155–164
Sodium benzoate aqueous solutions, surface activity and energetics of aggregate formation in, 451–468

Sodium carboxymethyl cellulose, and microcrystalline cellulose, pseudoplasticity and thixotropy of starch hydrogels prepared with, 283–294
Sodium mono(2,4,4′-trimethylpentyl)phosphinate, optimization of synthesis of and purification and surfactant properties of, 221–232
Solvent systems, surfactant enhanced mixed, physical properties of, 543–555
Spectroscopic studies, molecular, of organized molecular assemblies, 339–372
Stability
  differential scanning calorimetry as a tool for prediction of for emulsions, 607–631
  of water-in-oil emulsion, relations of interfacially active fractions to, 575–605
Stabilization and destabilization, of water-in-crude oil emulsions from the Norwegian continental shelf, 557–574
Starch hydrogels, pseudoplasticity and thixotropy of as prepared with microcrystalline cellulose–sodium carboxymethyl cellulose, 283–294
Stratum corneum, water and (book review), 99
Surface activity, in aqueous sodium benzoate and salicylate solutions, 451–468
Surface charge, determination of for characterization of core-shell functionalized acrylic dispersions, 273–282
Surfactant-enhanced mixed solvent systems, physical properties of, 543–555
Surfactants
  adsorption and aggregation of, 305–332
  cationic, analytical and biological evaluation of (book review), 397
  combination of anionic and cationic, influence of on interfacial tension, 435–449
  micelles, cationic, anionic, and nonionic, effect of on the alkaline hydryolysis of esters, 531–541
  mixed cationic, association phenomenon of in a nonaqueous system, 233–247
  mobility of at the water-in-oil emulsion interface, 105–114
  nonionic
    carboxylated, the adsorption of at the carbon black–water interface, 205–220
    a new refraction method for determining the degree of ethoxylation of, 495–510
    system, the effects of alcohol with different chain length on the phase equilibria of, 249–261
    temperature-insensitive microemulsion phase behavior with, 165–188
  selected anionic, cationic, and nonionic (book review), 99–101

T

Ternary solutions, water/ethoxy alcohols/toluene, reactivity and microstructure in, 1–29

Tetraethoxysilane, reaction with aluminum nitrate nonahydrate in ethanol, 31–50
Tridecyl alcohol sodium sulfates, propoxylated, microemulsions formulated with, 115–135

U

Ultrafines, mineral, magnetic aggregation in dispersions of, 137–154

W

Water-in-crude oil emulsions, from the Norwegian continental shelf, a stabilization and destabilization study of, 557–574
Water/ethoxy alcohols/toluene ternary solutions, reactivity and microstructure in, 1–29
Water-in-oil emulsion, mobility of surfactants at the interface of, 105–114
Water-in-oil microemulsion systems, study of the activity and kinetic characteristics of glucoamylase in, 263–272
Water-soluble polymers, sedimentation in the presence of, 155–164
White oil, microemulsions and liquid crystals with, 409–424
